

Frequently Asked Questions (FAQs)

ACTRI Pilot Project Awards

Last Updated: August 12, 2026

Eligibility

Do I need to have a faculty appointment for the Pilot Project Award?

Assistant and Associate Professors and other appointments with [Principal Investigator \(PI\) status](#) at UC San Diego or an ACTRI [Partner Institution](#)* are eligible for the Pilot Project Award, though priority is given to early-stage faculty proposing translational science projects responsive to the call's priority themes, populations, and/or research methods. Full Professors are not eligible, unless they are entering a new line of research.

Postdoctoral Fellows and Project Scientists are not eligible. They may apply but will need a faculty appointment at time of award, if selected.

*Individuals employed by a Partner Institution without a faculty appointment are not eligible to apply as PIs but are encouraged to participate as co-Investigators on a project led by a UC San Diego or Partner Institution faculty member.

Can I apply with multiple projects?

Principal Investigators may only submit one pilot project proposal. Previous awardees are not eligible to reapply for 12 months following the conclusion of an awarded Pilot project.

Do I need to be a US Citizen or have permanent residence in the US to apply?

US Citizenship or permanent residency is not required for the Pilot Project Award.

Applicants who are non-U.S. citizens employed at a U.S. institution are eligible to apply. It is the responsibility of the applicant's institution to ensure that the individual's visa status allows them to remain in the U.S. for the duration of the project.

As part of the review process, we may request documentation confirming that the applicant's visa or employment authorization extends through the project period.

Are applications with Foreign Components allowed?

At this time, Foreign Components are not allowed.

Application Requirements

Do I need to apply through the Research Affairs/HSSPPO office?

No, you will apply directly to ACTRI by clicking on the application link listed on the ACTRI Pilot Project Award website. You will not need to submit RES or other internal forms required by HSSPPO.

What are the Reviewer criteria for this application?

Phase	Reviewers	Criteria
Phase 1 – Letter of Intent	ACTRI Leadership	• Significance of the research and scientific quality • Clinical & translational science focus • Responsiveness to priority themes, populations, and/or research methods • Likelihood of future funding
Phase 2 – Full applications	• Content Experts	• Significance of the research and scientific quality • Clinical & translational science focus • Feasibility of completing within funding period

		• Likelihood that the work will yield important new information, technology, service and/or yield new federal funding • Principle Investigator and co-Investigators' qualifications
	• Community Reviewers	• Community Impact section's clarity • Likelihood that the project will benefit and/or involve local communities

What is meant by “translational science focus” as a review criterion?

Translational science refers to systematic efforts to understand and address roadblocks commonly encountered in translational research. Whereas **translational research** focuses on moving discoveries from basic science to health implementation, **translational science** identifies and addresses barriers in the scientific process that can be generalized to other translational research projects and scientific fields. Translational science thus enables and accelerates translational research by providing generalizable and scalable scientific and operational innovations, while maintaining scientific and ethical rigor.

ACTRI supports the spectrum of translational science, from the translation of concepts into testable applications, to the translation of health care delivery to the community. See the following resources for more information: [NCATS Translational Science Resources](#), [Montefiore Einstein CTSA](#); [University of Utah CTSA](#), [UAMS CTSA](#)

Do I need to have an approved IRB/IACUC protocol to apply if my project involves animal and/or human subjects research?

You will not need evidence of IRB or IACUC submission or an approved protocol to apply for Phase 1, but you must submit evidence of IRB or IACUC submission if invited to submit a full application.

IRB or IACUC approval is required at time of award. Delayed IRB or IACUC approval postpones funding initiation.

What if my ACTRI membership application has not been approved by the submission deadline?

You can still select “Yes” in response to the question inquiring about your ACTRI membership *if* you submitted your membership application before the Pilot Award submission deadline.

Please email researchcomm@health.ucsd.edu for ACTRI membership status inquiries.

What format should the budget be submitted in?

Any budget form is acceptable, we simply ask that it lists each personnel, their effort, salary, benefits, and non-payroll.

Do I need to provide a budget justification and a study timeline?

Yes, both a budget justification and a study timeline (template provided in InfoReady) are required when submitting a full application to ensure feasibility within the funding period.

\$40,000 in direct costs can be budgeted for the 12-months project in line with allowable expenses on federal grants. Cost extensions are not allowed and unspent funds by March 31 will not be available for further research.

Expense	Allowed	Not allowed
PI Effort (capped at 1.2 calendar months)	X	
Postdoctoral Fellow Support	X	
Clinical Research Coordinator (CRC)	X	
Travel		X

Clerical Help		X
Office Supplies		X
Books and Subscriptions		X
Publication Expenses		X
Tuition Remission		X
Course Buyout		X
Graduate Student Support		X

Awardee Expectations

May I defer acceptance of this award?

No, we do not accept deferrals.

What expectations are there of Pilot Awardees?

All investigators selected for funding will be required to meet quarterly with the ACTRI Pilots Director and Management Team to discuss progress, potential challenges, and ensure that expenditures will be spent within the project period.

In addition, investigators must submit a progress report – as required by the program’s funder, NCATS. A follow-up report will be due one year after the project’s completion. This report will consist of a detailed description of progress to date and a listing of all submitted publications and grant applications (pending or funded), meeting abstracts, and seminars relating to the pilot project.

Upon concluding the Award, investigators will have the opportunity to participate in ACTRI’s “What’s Next” program that provides post-award support as investigators pursue extramural funding.

What if I have other questions or I would like to meet with someone to discuss my application?

Please contact **ACTRI-Education** at ACTRI-Education@health.ucsd.edu for any questions about the program.
